

Standard Report, Purchase Order, Transfer & GRN Viewer Update

When running Standard reports or printing Purchase Orders, Transfers and GRN's the filter and functionality control options have been updated. The only functionality change is when printing, OpSuite will now print to a PDF viewer before printing your document. This saves the requirement of a system administrator installing the windows print driver on every machine to print these documents.

Below are the changes which will be implemented as part of this update –
