

OPSUITE UPDATE MODULES

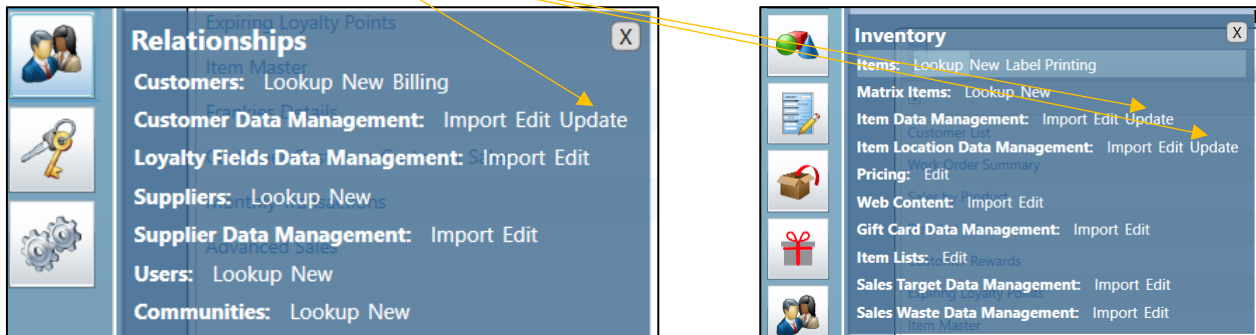

Now Available For:

- Item Data Management
- Item Location Data Management
- Customer Data Management

The OpSuite Update modules enable updates to existing data using a spreadsheet. They are used as an alternative to the various OpSuite Data Management Imports when importing a maximum of ten columns. The processing time now for saving changes is proven to be at least 90% faster compared to the existing Import options. Please note that the validation time will remain the same.

The OpSuite Update Options can be found alongside the existing Import and Edit options in the relevant Data Management menu options:

Significantly Faster

Using the OpSuite Customer Data Management Update module as an alternative to the OpSuite Customer Data Management Import module, the processing time now for saving 10,000 customers is up to 97% quicker, typically reducing the time from 27 minutes to just 36 seconds (*based on 10,000 customers and using 1 x column to update*).

Similarly for the OpSuite Item Data Management Update module as an alternative to the OpSuite Data Management Import module, the processing time now for saving 10,000 items is up to 95% quicker, typically reducing the time from 15 minutes to just 45 seconds (*based on 10,000 items and using 1 x column to update*).
